PROJECTS

- **SACO Technology**
Company: Armia Systems, Kochi
Technologies Used: PHP, MySQL
Team size: 3

Saco Technology is a Customer relationship management system. It's a multi leveled system. It can be used for a company and other companies which come in direct and indirect contact with it. Its working is controlled by setting different access levels for each level of users like admin, reseller, sub-reseller, enterprise and their end users. Each level can decide the capabilities of the next sub-level system or its own end users. There are different modules like Home module, CRM module, Settings module etc.

- **CUBBYHOLE**
Company: Emvigo Technologies, Trivandrum
Technologies Used: Laravel, AngularJS, MySQL
Team size: 3

This is a real estate website where a user can login into the system and he/ she can buy or sell his/ her properties. Only the paid registered users are capable of selling their properties.

After the verification from the admin side, the property is listed in the website. Users can add the description and the pictures of the properties.

An anonymous user can browse the properties listed, but if he/ she wants to contact the sellers, he/ she should be registered. A user is able to get all information about the locality where the property is situated. A registered buyer can contact seller by sending mails through CubbyHole.

- **KAZHAKOOTTAM INFO**

Company: Crantia Technologies, Trivandrum

Technologies Used: PHP, JQuery, MySQL

Team size: 3

A one stop platform, featuring all the relevant information of Kazhakoottam, catering to the queries of people. The site is expected to serve as an exclusive and unique directory of Kazhakoottam, by serving all the relevant and useful information at one's finger-tips.

The whole project is divided into two sections; client section and admin sections. In the client section, a user can search about the jobs openings, movies, business categories etc. Registered users can register his/ her profile, post ads (rental, sale, gadget) and they can edit or delete their profile, ads, and their account details. The admin has the right to approve or reject this ad. The admin can add new job opening, new movies, new business ads etc. Facebook and Google login option is in progress.

- **DWELLCON BUILDERS**

Company: Aceware Technologies, Trivandrum

Technologies Used: PHP, JQuery, MySQL

Team size: 2

The project was developing a website for the real estate people. The whole project is divided into two sections; client section and admin sections.

The clients can view the completed and ongoing projects. Clients can send their enquiry, contacts through the email. The admin has the option to add a new project and move the ongoing project to completed state manually once whole villas are sold.

- **MUNNAR HOLIDAYS**

Company: Aceware Technologies, Trivandrum

Technologies Used: PHP, JQuery, MySQL

Team size: 2

The project was developing a website for the Munnar Holidays, a holiday tour management team. The whole project is divided into two sections; client section and admin sections.

The tourists can view the details of the hotels, transport providers, guides and the photographers of Munnar locality. There is an option for the transport providers, guides and photographers can register themselves.

The admin can add hotels, entertainment details and general information. The admin can approve/ reject the registrations of transport providers, guides and photographers.
