## Projects Undertaken

### 1. Telfaz Website

**Team Size** 4  
**Role** Development Team Member  
**Duration** January 2012 – June 2012  
**Environment** CMS: Wordpress  
Languages: PHP 5.3  
Back-end: MySQL  
O/s: Linux

#### Description

Telfaz-TV is an Arabic IPTV network and 'Live Channel Streamer' (LCS) is the proposed Android video streaming application for the Android TV device, of this TV network, which is used to stream live TV channels. This consists of a web application as well as an android application. It contains a wide variety of functionalities. Users can view, add, edit, delete and activate/deactivate channels and videos. They can also group, categorize and make videos or channels as favorites.

#### Responsibilities

- Designed the template pages for user and administrator.
- Developed the administrator module.
- Write the **RESTful Webservice** for performing various user and administrator actions.
- Requirement analysis and design webservice protocol.
- Test each webservice response for the desired output.
- Bug fixing.

### 2. ShareTheFact(STF)

**Team Size** 4  
**Role** Development Team Member  
**Duration** March 2012 – December 2012  
**Environment** CMS: Wordpress  
Languages: HTML, CSS, jQuery,  
Back-end: MySQL  
O/s: Linux

#### Description

ShareTheFact is a multi platform (web and mobile) social networking system. Through this system users can add new interesting posts and can comment and like posts. They can make friends and chat with them through this system.

#### Responsibilities

- Converted the html template to wordpress theme.

- Created a new wordpress plug-in for chatting purpose.
- Developed the administrator module and friends module in user part.
- Bug fixing.

### 3. Graffiti Website Prototype

**Team Size** 4  
**Role** Development Team Member  
**Duration** November 2012 – April 2013  
**Environment** Languages: HTML, CSS, jQuery, PHP 5.3  
 Back-end: MySQL  
 O/s: Linux

#### Description

The Graffiti Website Prototype is the multi-client platform which offers the users to add incidents (Graffiti) observed on their daily life routine. The purpose of the Graffiti Website Prototype application is to help reduce property damage caused by graffiti. In Graffiti Website Prototype application the users can add the incidents including pictures, along with tags and complete address where he has found the particular graffiti. The administrator can approve, trash or delete a particular graffiti.

#### Responsibilities

- Write the **RESTful Webservice** for performing various user and administrator actions.
- Requirement analysis and design webservice protocol.
- Test each webservice response for the desired output.
- Bug fixing.

### 4. SeatZ Application

**Team Size** 4  
**Role** Development Team Member  
**Duration** May 2013 – November 2013  
**Environment** Languages: PHP 5.3, HTML, CSS, jQuery  
 Back-end: MySQL  
 O/s: Linux

#### Description

The purpose of the SeatZ application is to offer users transportation solutions that make travel easier and encourage users to make more environmentally friendly transportation decisions. Specifically the goal of the SeatZ application is to increase the car occupancy in the Netherlands from beyond 1 person per car. By offering users additional transportation solutions (that can substitute for the need to have one's own car) SeatZ will be able to not only make transportation easier, but also reach the goal of increasing average car occupancy. SeatZ will be accessible through both a mobile application and a web application (a website). The mobile application will focus on the day to day interactions of the average user. The web application, on the other hand, will focus on the management side of the platform.

## Responsibilities

- Create the HTML templates for the user as well as the administrator modules.
- Develop the Administrator Modules as well as the user authentication modules.
- Module integration.
- Unit testing after the completion of each module.
- Bug fixing.

## 5. Swipart

<b>Team Size</b>	3
<b>Role</b>	Development Team Member
<b>Duration</b>	November 2013 – December 2014
<b>Environment</b>	Languages: PHP 5.3, HTML, CSS, jQuery Back-end : MySQL O/s: Linux

## Description

Swipart Application is developed for artists based image gallery. There will be a web application which acts as an interface between server and mobile client. User can register and login through web or mobile client. Users can upload images of their artworks with its price and other details.

## Responsibilities

- Developed the web application.
- Module integration.
- Write the Webservice for performing various user actions.
- Unit testing after the completion of each module.
- Bug fixing.
