Academic Projects

Mini Project: Stock Management System

Duration: 3 months

Project Description: This is a desktop application implemented in order to overcome the drawbacks and limitations of the existing stock management procedure which uses pen and paper. This software manages the stock of an organization automatically which helps reduce time and work burden.

Main Project: Detecting Malicious Facebook Applications

Duration: 1 year

Project Description: Facebook is one of the most popular social networking sites and the main reason for this popularity is the presence of third party applications. Recently, hackers have started taking advantage of this popularity of this third-party apps and deploying malicious applications. This software identifies the third party applications which contains malicious contents and warns the user about the malicious application.
