MAIN PROJECT:

- A project based on the topic *'RFID Navigation System for the Visually Impaired'* is chosen.
  The project focuses on designing a device for visually impaired people that is comfortable to use and help with travelling independently. In this the destination is selected by switch. IR sensor is used for obstacle detection. While RFID navigation system for visually impaired can help navigate to destination, this can lead to longer routes and wasted time. Using a walking stick relies on trial and error, particularly in unfamiliar location. Current navigation tools for the visually impaired focus on travelling from one location to another.
