➢ Captcha in a web Form

Project #1

Project Title   : Online Job Portal
Language   : Php
Operating System   : Windows XP
Browsers Tested on   : Firefox

Project Description

Online job portal is a web application. It provides the candidates ability to register to this application and search for jobs, manage their accounts. Each candidate will have their own account with their own home page. On the other hand companies that are willing to publish the jobs for their company to candidates can register to the job portal and get their own account created and can post jobs to portal's database. Companies can contact to applied candidates directly. Registered companies can add or remove jobs and these jobs can be seen by various candidates and they can contact the company person for the job. Main aim of this web application is to make a good web application that can make this job search option easy and accessible to everyone who is interested. Administrator can manage both employees and employer.

Project #2

Project Title   : EduPad, Table based Educational System for adults in
                                           rural area.
Language   : Android
Operating System   : Windows XP
Project Description

       This is an educational system called EduPad; to reduce the rural adult illiteracy using advancements in technology. This system can be used to make up for lack of qualified personnel and adequate infrastructure in rural India. Using a tablet can teaching multiple languages. We developed interactive educational software which can run on the tablet. The software helps the user to learn to write as well as spell the alphabets. Initially the software teaches alphabets and then moves onto words and sentences. This is an easiest way to teach adults in rural area and also they can study them self without the help of others.

Project #3

Project Title   : Department Automation
Language   : PHP
Operating System   : Windows XP

Project Description

Automation of various department activities of college. It will allow the college to address potential students by showcasing their course and facilities and its current students and faculty by providing access to the various facilities provided by the college in an easy and interactive manner students can login to their own page and see their

internal marks and their status. Faculties cans calculate the internal marks in an easy way and also they can do many applications through this site. As well as it will help people in college and outside of it to know about news and events happening in college.

Project #4

Project Title : E-Tendering (Electronic Tendering).
Language : ASP**.**NET
Description : Online Tendering

Project Description

E-Tendering project is an online web portal. Which is an automated method for manual tendering process where tendering process can be done through online process. While using this site user need not to submit documents and participate on location for attending manual tendering process. Through the online method business people form building, construction fields can file tenders and submit. Users only need to register with application and get unique user name and password for accessing these features.

Project #5

Project Title : Grand Calculation.
Language : Visual Basic
Project Description

Calculating the Grand of Students belongs to Minority category. This will help the office staff to calculate the grand of each student who they belongs to minority community by checking their marks and community. Using this calculation is simpler and can save time.

Seminar

➢ Improved Vehicle Detection Based on Ada-Boost Algorithm.

➢ Nano Technology.
